# Aims & Principles of SHARE

---

- **Aim:** Understand the **ageing process** in Europe (**individual** and **societal** level).  
Basic research and fact-based policy development
- **Principle 1:** Understand the **interactions** between health, labour force participation, and institutional conditions
- **Principle 2:** Use **cross-national variation** in policies, histories, cultures to understand causes and effects of welfare state interventions
  - Ensure cross-national comparability of data (objective data, enhanced survey methods)
- **Principle 3: Longitudinal** – since ageing is a process not a state

# A Global Laboratory

- ✓ So far SHARE has information on approximately **123,000 individuals (293,000 interviews)** living in **20 European countries (+ Israel)**.
- ✓ There are **five** available waves of data, including the retrospective survey **SHARELIFE** (wave 3).
- ✓ The sixth wave (that took place in 2015) also collected **24,000 DBSS** that will provide **biomarkers data** (Vitamin D, total cholesterol, C-reactive protein, cytokines and glycated hemoglobin).
- ✓ The **seventh wave** will go in the field at the beginning of 2017:
  - ✓ It will have **retrospective questionnaire** for those who did not participate in SHARELIFE in 2008/09
  - ✓ It will include 8 new countries: Finland, Lithuania, Latvia, Slovakia, Romania, Bulgaria, Cyprus and Malta

- ✓ **Longitudinal information** on employment status, transitions from employment to retirement (or other status), characteristics of current and past job, pension benefits.
- ✓ **Detailed occupation coding** for respondents' (and their parents') jobs: **job coder** available since wave 6 (in wave 7 it will be introduced in the retrospective survey).
- ✓ Retrospective information on respondents' lives (**SHARELIFE**): complete **job histories** and **childhood conditions**.
- ✓ **Contextual variables**: institutional characteristics of the pension systems; educational reforms; maternity leave provisions; etc.

- ✓ The “job coder” allows to **code ex-ante** the self-assessed respondents’ (and their parents’) occupation.
- ✓ The list of job titles used comes from the **World Database of Occupations (WISCO)** - some countries (Estonia, Israel and Portugal) provided their own list.
- ✓ At a **first evaluation** the data quality from wave 6 is **good**:
  - ✓ The job coder captures **more detailed job information** than questions based on level-one ISCO classification
  - ✓ **Coded job titles** are mostly **consistent** with the reported industry and educational attainment

- ✓ 3<sup>rd</sup> wave of SHARE
- ✓ 30,000 men and women over 13 European countries
- ✓ It focuses on people **life histories (retrospective)**
- ✓ It includes information on:
  - ✓ Children history
  - ✓ Partnership history
  - ✓ Accommodation history
  - ✓ **Job history**
  - ✓ Health history
  - ✓ Childhood (age ten) conditions
- ✓ Extremely **rich**, but **more complicated** than a standard micro-dataset to use

Three possible options:

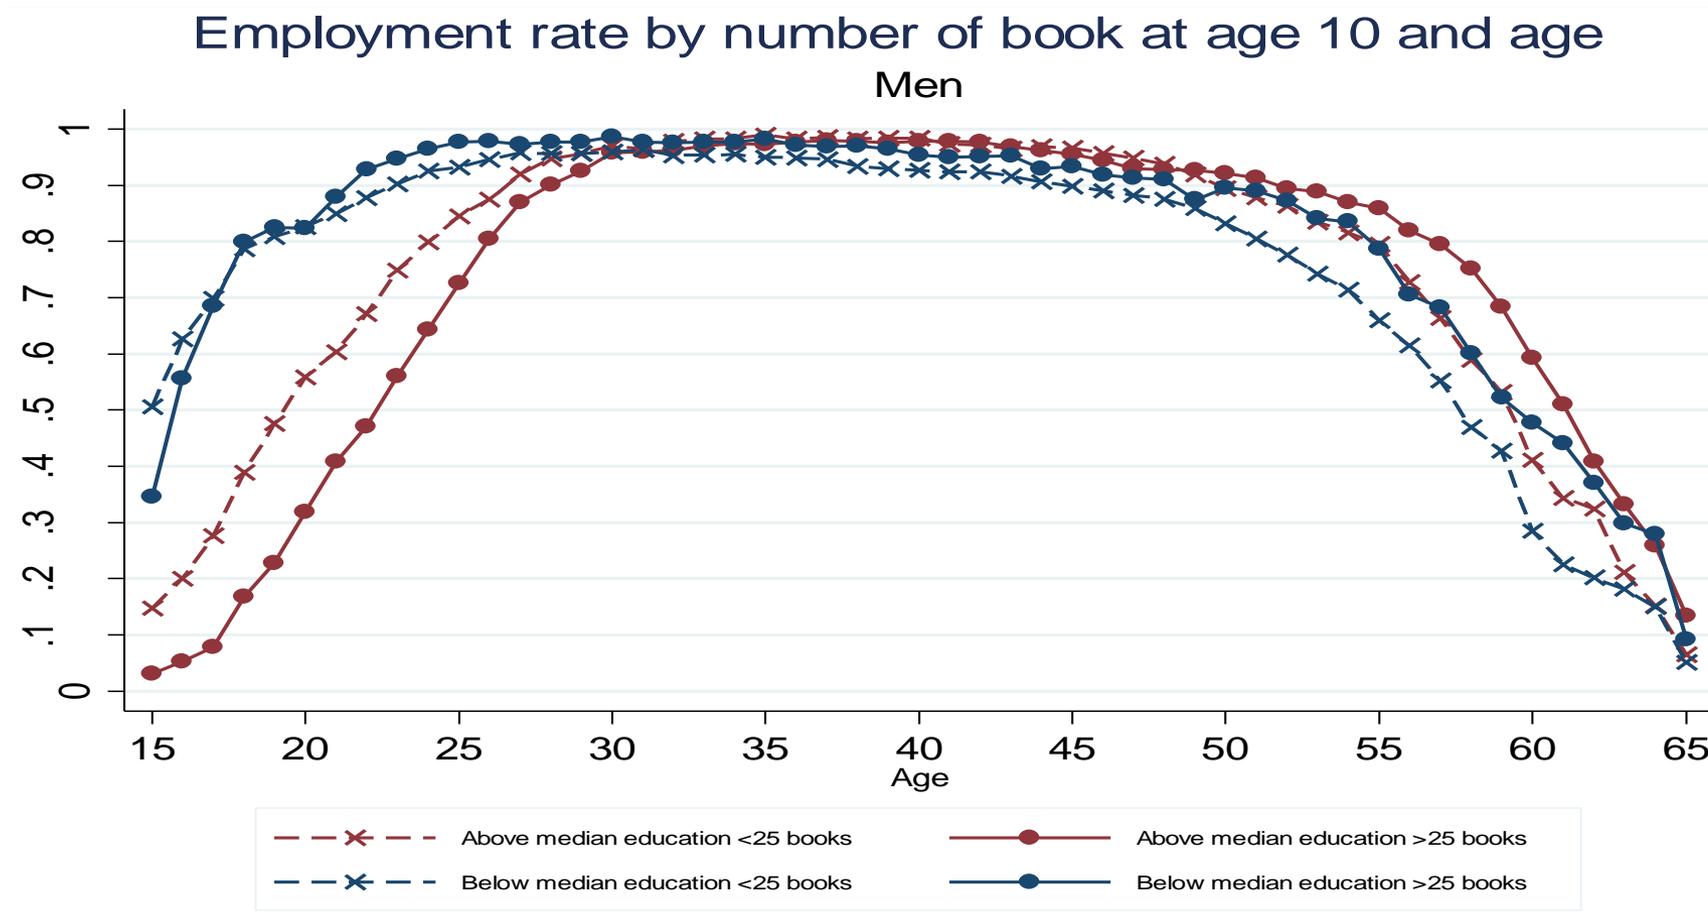

1. Use previous waves of SHARE and **merge retrospective information**. Useful to study the impact of **childhood circumstances** on different outcomes, e.g. .
2. **Build a panel**: each line is an id-year combination. Very long panel, but limited number of variables.
3. **“Events” database**: each record is a specific event (e.g., maternity episode, new job, etc.). Researchers can attach to each event the information that is relevant for them.

- ✓ The job episode panel is a **retrospective panel including the entire respondents' job histories.**
- ✓ It includes **information** on:
  - ✓ **Employment status:** in education, working, retired, unemployed.
  - ✓ **Each employment spell** includes information on industry, employment type (employee, civil servant or self-employed), first wage/earnings, working hours (PT/FT), reason job ended.
  - ✓ For the **main career job** there is also information on the last wage/earnings.
  - ✓ **First pension benefit**
  - ✓ Additional information on: **demographics** (year of birth, gender, age country, number of children, age of youngest child, marital status) and **characteristics of the pension system** (contribution rates by employee and employer, early retirement penalty, statutory and early retirement age, min and max pension benefit).
- ✓ It can be **easily merged** with the other sections of SHARELIFE and with the regular waves.

- ✓ The job episode panel is freely available to researchers.
- ✓ After wave 7 data are collected and released, the job episode panel should eventually cover 120,000 individuals across 28 countries.

- ✓ Construct employment-age profiles, combined with childhood conditions
- ✓ Evaluate impact of employment shocks on financial well-being (e.g. effect of an unemployment spell on the hazard of entering or exiting financial hardship)
- ✓ Construct measures of:
  - ✓ Quality of work career (e.g. % of years in high skilled job)
  - ✓ Permanent income and age-earnings profiles
  - ✓ Social Security Wealth under different pension regimes

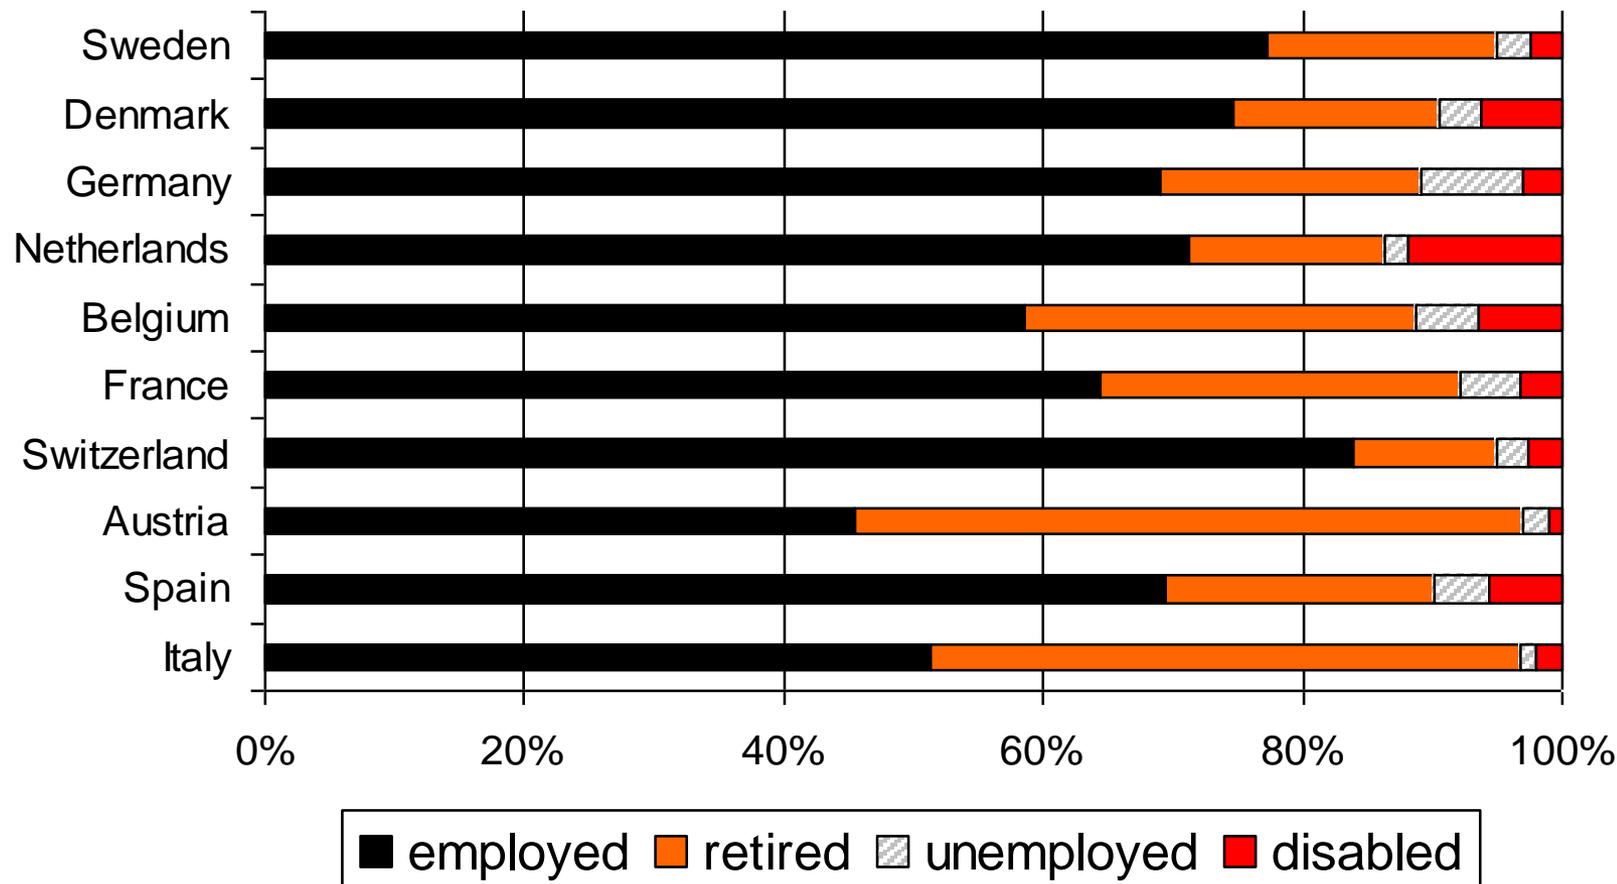

- ✓ **Net and gross measures of Social Security Wealth** for workers and retirees will soon be available in SHARE
- ✓ These measures are the **first attempt** of computing and delivering to the scientific community a set of **internationally comparable measures of pension wealth for all SHARE countries.**
- ✓ The computation of these measures implies **integrating life-history micro-data and contextual information** summarizing the evolution over the last century of the pension system characteristics of SHARE countries.
- ✓ The **SSW of workers** relies on a variety of retrospective information regarding both individuals' working career and country of residence, which is obtained from the **Jobs Episode Panel**
- ✓ The **SSW of retirees** has been computed exploiting information on the **self-reported pension amount received.**

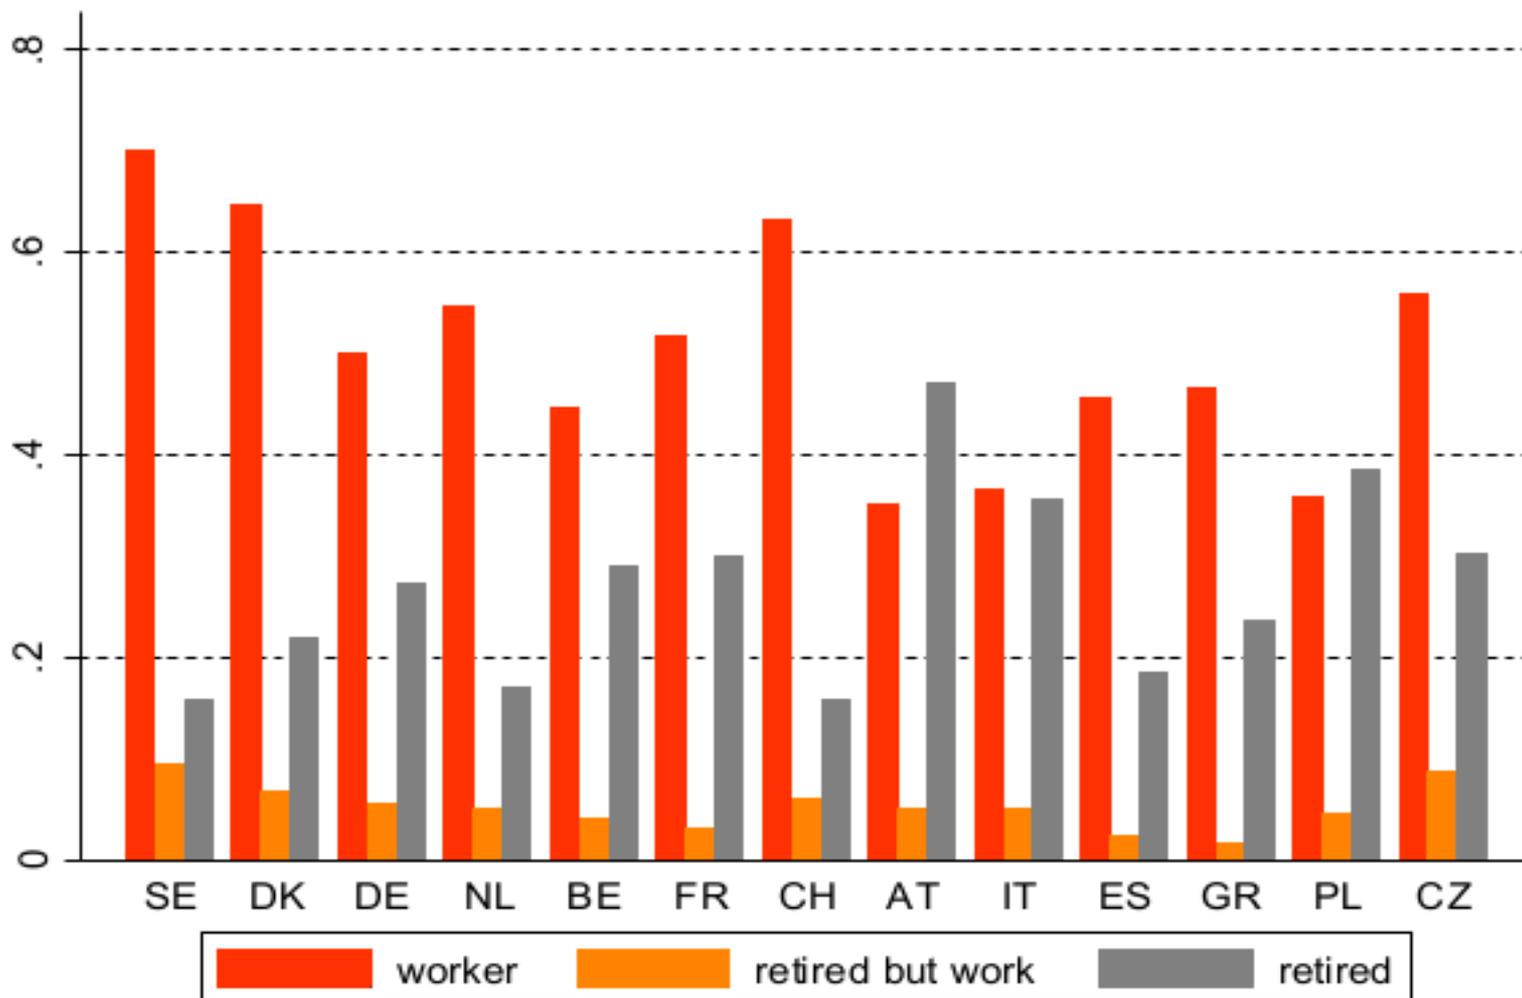

Brugiavini A., Trevisan E., Weber G. (2014) The workability of the young old. Mimeo.

# Unused labour capacity

Economic activity - age 50-64

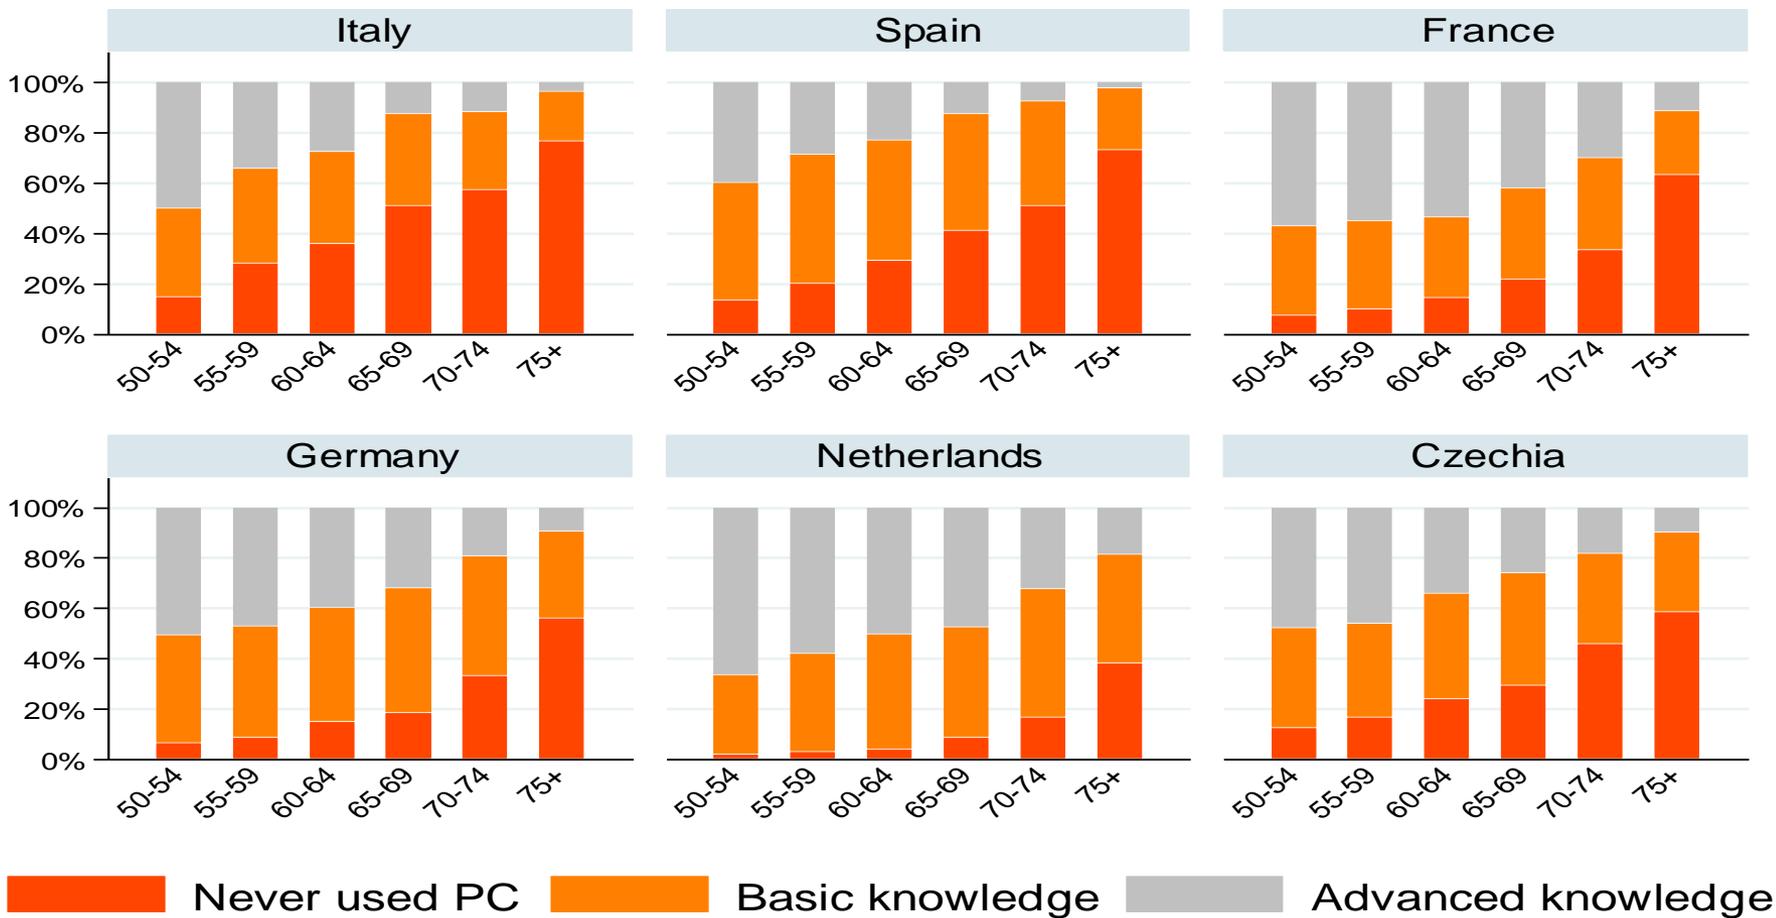

## Distribution of activities for “healthy” individuals

# Or reduced productivity: computer abilities by age group, 2013

Graphs by country\_order

- Institutional arrangements seem very relevant in explaining differences between countries (and across individuals) in labour supply and participation at older ages.
- Health “on its own” does not explain labour market decisions
- Job conditions (work quality) seem relevant as well
- Further research is needed of actual measures of productivity

# Use it for your own research!

The screenshot shows the SHARE website interface. At the top, there is a navigation bar with the SHARE logo and a map of Europe. Below this, a search bar and a 'News' section are visible. The main content area is titled 'Employment' and features a photograph of an elderly woman. Below the photo, there are two bullet points discussing retirement incentives and private pension provision in Europe. A left-hand navigation menu lists various sections like 'Home', 'Overview', 'Summary Results', 'Family Networks', 'Health', 'Economics', 'Employment', 'Wave 1-5', 'Data Access & Documentation', 'Methodological Research', 'Press Information & News', 'Contact & Organisation', 'Publications', and 'FAQs'.
